

Does student achievement in Maryland K–12 public schools differ by school level and whether the attendance boundary is racially equal for the 2018-19 school year?

Students in type B schools on the side of the attendance boundary with fewer racial minority students generally outperform students in type A schools on the side with more racial minority students. The discrepancy is even greater in schools with more racially unequal attendance boundaries.

Note that the y-axis scales differ in this visualization due to varying numbers of schools in each group.

Equal Attendance Boundary

Unequal Attendance Boundary
