

How much does the race of Students vary in Maryland K–12 Public Schools by school level and type for the 2018–19 school year?

Racial composition of students enrolled in type A and type B schools, as sampled in the Urban Institutes’ Dividing Lines study, where type A schools are on the side of the attendance boundary with more racial minority students, and type B schools are on the side with fewer racial minority students. The share of White students is higher for high school than for elementary and middle school, indicating drop-out rates may be higher among racial minority students.
